

iSecure

A Surveillance Automation Solution

INTRODUCTION

iSecure

iSecure is a real-time video analysis solution for surveillance. It automates event detection in surveillance video streams from fixed cameras. Thus it increases security personnel efficiency.

The solution comprises software that runs on **Windows** systems. The operator sets up various security rules on video streams. iSecure checks video in real time for the occurrence of behavior that matches a rule. Alerts are generated to the operator when a security rule condition is met.
